B20 Engine

While sharing some design elements and both being multivalve Honda four-cylinders, the B-series and B20A differ substantially in architecture, enough to be considered distinct engine families. They were made in 1.6 L (1,595 cc), 1.7 L (1,678 cc), 1.8 L (1,797 cc), and 2.0 litres (1,973 cc) variants, with and without VTEC (Variable valve Timing and Electronic lift Control).

Honda B engine - Wikipedia

The B20B Engine is part of Honda's B-series of DOHC / SOHC four cylinder automotive engines. Honda introduced the first B-series engine in 1989 as a performance engine with single and dual cams. All Japanese B series engines follow a four code series.

The B20Z and B20B engines were produced until 2001, when they were replaced with the modern K20A. Honda B20B/B20Z engine problems and malfunctions Like the entire B-series, this engine is considered to be one of the most reliable and durable.

Honda B20B (B20Z) engine | Features, tuning, turbo, VTEC

The Honda B20A engine series, known as the B20A and B21A was an inline four-cylinder engine family from Honda introduced in 1985 in the second-generation Honda Prelude. Also available in the contemporary third-generation Honda Accord in the Japanese domestic market, along with the Accord-derived Vigor, the B20A was Honda's first line of multivalve DOHC inline four-cylinder engines, focused towards performance and displacing 2.0 to 2.1 litres. The third-generation Prelude was exclusively powered

1.4 B20 Turbo Problems The B20V is a great setup for a budget N/A car, but due to a poor sleeve design, we do not recommend a B20 for turbo applications. The sleeves are so weak that breakage is never a matter of if, but when. There is no way to reinforce the sleeves adequately to alleviate the breakages, your only option is to sleeve the engine.

We've found that either the Street Torque or the Street Performance cams, coupled with a header and a 2 inch exhaust system, work nicely on otherwise stock B20 engines. If you're building a 2130cc big bore kit, you may find that 2.25" or even 2.5" is more suitable as the larger displacement will provide an increase in low end torque that more than compensates for the larger pipe diameter. Confusing? Yes.
