Excitotoxins The Taste That Kills

It's truly unfortunate that author Russell Blaylock chose a lame subtitle "the taste that kills," instead of specifically targeting a neurologically-oriented audience. Blaylock points the finger straight at excitotoxins, a family of food-born amino acids that have the capability to excite brain neurons to death.

EXCITOTOXINS THE TASTE THAT KILLS PDF - Ebichu PDF

Excitotoxins are a class of chemicals (usually glutamates) that over-stimulate neuron receptors. Neuron receptors allow communication between brain cells; when exposed to excitotoxins, they fire impulses at such a rapid rate that they become exhausted. Several hours later, depleted, the neurons die.
