It has passed to climb mode. (in the airbus manual it is said that if one selects SSpeed during SRS mode, it reverts to OPen CLimb) Now this doesn't happen if you wait until you are in the AIR before you pull any knob. So if you want to fly the departure with selected speed and VS here is my advice: Before take-off set everything to managed (initiate Vs speeds, flex temp, etc). Do a normal take-off with flex power and SRS. Rotate the aircraft (slowly) to the VS and speed you want. Then (in the AIR ...
