The engine was only used in the Supra and Cressida. In 1982, when the 5M-GE was introduced, Toyota was the world's largest maker of DOHC engines. They put the camshafts in the 5M-GE on either side of the engine, directly over the valve system, reducing weight and allowing higher revving and quicker response.

The Toyota Cressida (Japanese: トヨタ クレシダ), Toyota Kureshida) is a compact, later mid-size car manufactured by Toyota from December 1976 until 1992 through four generations. Cressida was the export version of the Mark II sold in Japan. The "Cressida" nameplate derives from the Trojan character.

### Toyota Cressida - Wikipedia

Toyota Motor Corporation's M family of engines were a longitudinally mounted straight-6 engine design. They were used from the 1960s through the 1990s. All M family engines were OHC designs. While the M family was born with a chain-driven single camshaft it evolved into a belt drive DOHC system after 1980. All M family engines used a cast-iron block with an aluminum cylinder head, and were ...
